DETAILED ACTION

Applicants' arguments, filed 3/18/04, have been fully considered but they are not deemed to be persuasive. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

PRIOR ART

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 11-15, 21, 57-59, 62, and 63 are rejected under 35 U.S.C. 102(e)(1) as being clearly anticipated by De Lumley-woodyear et al. (PreGrant Publication 2002/0081588).

This rejection is maintained and reiterated from the previous office action, mailed 12/17/03, and as necessitated by amendment regarding newly added limitations and claims.

Applicants argue that covalently coupled redox active moiety selected from the group consisting of transition metal complexes and organic electron donors is not disclosed in the reference. In response the basis for the rejection as set forth in said

Art Unit: 1631

previous office action included paragraphs [0110] and [0111]. Consideration of these paragraphs reveals that enzymes which catalyze redox reactions are redox moieties which are reasonably organic electron donors as part of such redox reactions. The covalent attachment of such organic electron donor enzymes is disclosed, for example, in the reference in paragraph [0103] wherein a standard 5' attachment chemistry is employed which includes covalent bonding to form Schiff's bases with reduction with a reducing agent to stabilize such covalent attachment thus supporting this rejection as necessitated by amendment.

Applicants further argue that the extension of the probe to incorporate an electronically responsive detector as in claim 57 is not disclosed in the reference. In response the above attachment via Schiff's base etc. chemistry clearly extends the probe with the redox and thus electronically responsive detector agent thus again supporting this rejection.

Applicants lastly argue regarding the claim 62 limitations as well as the claim 63 limitations which have been newly added. Again it is noted above that the 5' terminus of the oligonucleotide probe is covalently attached with a redox moiety as pointed to paragraph [0103] as necessitated by amendment.

No claim is allowed.

Applicants' amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicants are reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1631

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

This application contains claims 5-7, 10, 16-20, 22-56, 60, and 61; drawn to an invention nonelected without traverse in the Paper filed 9/26/03. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the Central PTO Fax Center.
